Although, the best prior art of record to Yanagidate (US 5,610,884) teaches the optical information reproducing system comprising a prism, a beam splitter, and sensor for detecting tracks of the cards,

Ogino (US 5,461,220) teaches an information processing system comprising a micro processing unit storing a predetermined control program for operating an AT (auto-tracking)/AF (auto-focusing) control unit wherein the AT/AF control unit controls a movement of focusing objective lens.

However, Yanagidate, Lu, and Ogino taken alone or in combination of other references, fail to specifically teach or fairly suggest that the non-parallax optical auto-focusing system comprising a movable lens, an actuator for moving the movable lens along optical axis, the first beam splitter is located on a first side of the movable lens
